

QA Report — Tanishak / Intranet Dashboard

Reporter: Tanishak **Build under test:** `te-tanishak-intranet-homepage` **Date raised:** 18 May 2026 **Reference bar:** Stripe / Linear / Notion-grade polish per `CLAUDE.md`

- ⚠️ **Cross-cutting blockers** flagged in this report (read first):
- **API contract failure** in HRMS Category Management (POST → `subcategories not found`) — blocks all subcategory creation.
 - **Date / time validation gaps** across WFH, Leave, Regularisation forms — past dates accepted; Out Time can precede In Time (data-integrity risk).
 - **Leave-balance overflow** — users can apply more leaves than allotted (18/12 days) — business-rule breach.
 - **Permission-gating audit** required on calendar/leave/WFH approval flows — stale "pending" approvals for past dates suggest backend-state mismatch.

1. HRMS › Category Management

File: `apps/intranet/src/pages/dashboard/admin/HRMS/components/CategoryManagement/` Related: `SubcategoryDrawer.tsx`, `CategoryFormDrawer.tsx`

#	Severity	Issue	Recommended Fix	Acceptance Criteria
1.1	Bug — Blocker	<code>POST /api/v1/intranet/claims-management/categories/{id}/subcategories</code> returns <code>Route ... not found</code> . User cannot add any subcategory.	Verify backend route registration (controller mount path, plural vs. singular, trailing slash). On the frontend, confirm the mutation URL matches the API spec — <i>verify in docs</i> .	Adding a subcategory under any parent category succeeds (200) and the new row appears in the list without refresh.

2. Attendance & Leaves — Self Service

File: `apps/intranet/src/pages/dashboard/attendance/MyAttendance/`

#	Severity	Issue	Recommended Fix	Acceptance Criteria
2.1	Bug	Date picker in WFH, Apply Leave, Regularisation does not match project standard <code>DatePicker</code> component. Past dates are accepted. Validations on all three forms are incorrect. See <code>WFHRequestDialog/index.tsx</code> , <code>ApplyLeaveDialog/index.tsx</code> , <code>RegularisationDialog/index.tsx</code> .	Replace local date inputs with shared <code>DatePicker</code> from <code>packages/ui</code> . Add <code>minDate={today}</code> for WFH + Leave (future-only). Regularisation keeps past dates but block future. Re-audit Zod schemas: required fields, date range (From ≤ To), reason min-length.	Past dates rejected on WFH/Leave with inline error. Schema-level validation matches <code>'Please...'</code> standard. All three forms use the same <code>DatePicker</code> .

#	Severity	Issue	Recommended Fix	Acceptance Criteria
2.2	UX / UI	History tab — Reason column renders a wall of text in a single line, breaking the row layout. See AttendanceHistory/index.tsx .	Apply <code>line-clamp: 2</code> with tooltip on hover; ellipsis + "View more" expand affordance for full text. Constrain column <code>maxWidth</code> via theme spacing tokens.	Long reasons truncate at 2 lines; full text visible on tooltip / expand. No horizontal table overflow.
2.3	Bug	HRMS Dashboard › WFH tab still lists WFH requests as Pending even though the requested dates (e.g. 13/05–15/05) are already in the past (today = 18/05). See WfhManagementList/index.tsx and WfhRequests.tsx .	Add backend cron / on-read filter to auto-expire pending requests whose <code>toDate < today</code> → status Lapsed . On the frontend, filter out lapsed entries from the default Pending list and surface a "Lapsed" tab. <i>Verify auto-expiry policy with PM.</i>	No request with <code>toDate < today</code> appears under Pending. Lapsed entries are visible under a separate filter.
2.4	UX / UI	"Search requests" field uses non-standard styling (border + custom height).	Replace with shared <code>SearchInput</code> from <code>packages/ui</code> (used in other admin tables).	Search field visually identical to Employee Master and Claims search.
2.5	Feature Gap	Self Service › Attendance & Leaves currently exposes only Dashboard and History tabs; spec calls for Mark Attendance, Apply Leave, Regularisation to also be tabs (per reference build). See MyAttendance/index.tsx .	Add three additional tabs that mount existing <code>MarkAttendance</code> , <code>ApplyLeave</code> , <code>Regularisation</code> components (currently used as drawers / dialogs). Confirm IA with PM before unifying drawer + tab flows.	All five tabs visible in the order: Dashboard · Mark Attendance · Apply Leave · Regularisation · History.
2.6	Bug	Approved WFH (e.g. 30 May–03 Jun) does not render on the Dashboard calendar in advance. Approved leaves also missing on the calendar.	Calendar data source must include approved WFH/Leave entries with <code>date ≥ today</code> . Render with primary-dark token for WFH, leave-token for leaves. See AttendanceCalendar/index.tsx .	Future approved WFH days highlighted in primary-dark; future approved leaves in leave color; legend updated.
2.7	UX / UI	"Supporting Document (Optional)" upload field on Apply Leave drawer does not match project file-upload component standard. See ApplyLeaveDialog/index.tsx .	Swap to shared <code>FileUpload</code> (drag-drop + format hint + size cap). Specify allowed types: <code>pdf, jpg, png, docx</code> . Add client-side MIME + size validation.	Upload UI identical to Documents/POSH upload. Wrong type → inline error. >5 MB → inline error.

#	Severity	Issue	Recommended Fix	Acceptance Criteria
2.8	Bug — Data integrity	Regularisation Request: Correct Out Time can be set earlier than Correct In Time ; both can be in the past. See RegularisationDialog/index.tsx .	Zod refine: <code>outTime > inTime</code> . Also enforce <code>inTime</code> within working-hours window for the selected date. Add inline error messages.	Submitting Out < In is blocked with error "Out Time must be after In Time".
2.9	UX / UI	Dashboard calendar does not paint Holiday dates, even though the Attendance & Leaves tab calendar does.	Reuse the same holiday-fetch hook used in Attendance & Leaves calendar inside AttendanceCalendar/index.tsx . Ensure legend "Holiday" key is visible.	Public holidays painted with consistent token + legend matches Attendance & Leaves tab.
2.10	Bug — Business rule	Leave Balance shows 18/12 days — user has consumed/applied more than allotted. No cap on Apply Leave.	Backend: enforce balance check on submit (<code>requested ≤ remaining</code>). Frontend: disable Submit when computed days > balance and show inline error. Reconcile current overage with HR.	Apply Leave blocks submission once balance reaches 0; UI shows live <code>remaining = total - consumed</code> math.

3. My Claims

File: [apps/intranet/src/pages/dashboard/claims/](#)

#	Severity	Issue	Recommended Fix	Acceptance Criteria
3.1	UX / UI	"How Claims Work" stepper — the dotted connector between You Submit → MD Approval has a white gap cutting through the badges. See claims/index.tsx + claim s/index.style.ts .	Stepper connector <code>background</code> should sit <i>behind</i> step badges (<code>z-index: 0</code> on connector, <code>z-index: 1</code> on badges). Use solid <code>divider</code> token, not white gap.	Connector renders as continuous line behind all four step circles.
3.2	UX / UI	"Search claims..." input is not the standard <code>SearchInput</code> .	Replace with shared <code>SearchInput</code> ; remove ad-hoc border styling.	Field is pixel-identical to other admin search fields.

4. My Profile › About

File: [apps/intranet/src/pages/dashboard/profile/components/AboutTab/](#)

#	Severity	Issue	Recommended Fix	Acceptance Criteria
4.1	Bug	Edit drawer has no form validation . See AboutEditDrawer.tsx .	Add Zod schema covering About / Interests & Hobbies / Skills. Error messages must use <code>Please...</code> format.	Empty required field → inline error; invalid submit blocked.
4.2	Bug	Text areas have no character limit ; large blobs of text break the read view layout.	Apply <code>maxLength</code> per field (suggest: About 500, Interests & Hobbies 300). Show live <code>count/max</code> counter under each textarea. Trim whitespace on submit.	Counter visible; typing past <code>max</code> is blocked; long content wraps cleanly in read view.
4.3	UX / UI	Required fields missing the <code>*</code> asterisk indicator.	Pass <code>required</code> prop to <code>TextInput</code> label OR add <code>*</code> suffix in label per design tokens.	Every mandatory field shows <code>*</code> in the label.
4.4	UX / UI	Typography in read view does not match design system (raw text, no hierarchy). See AboutTab/index.tsx + AboutTab/index.style.ts .	Use theme typography variants only (<code>bodySMedium</code> for primary, <code>bodySRegular</code> + <code>textSecondary</code> for body). Group sections via <code>SectionWrapper</code> .	About / Interests & Hobbies render with proper heading variants and spacing tokens — no manual font overrides.

5. My Profile › Helpdesk

File: [apps/intranet/src/pages/dashboard/profile/components/HelpdeskTab/](#)

#	Severity	Issue	Recommended Fix	Acceptance Criteria
5.1	Bug	Category column renders as empty cell when the underlying value is <code>null</code> .	Add fallback render <code>value ?? '-'</code> (or shared <code>EmptyCellPlaceholder</code>). Apply consistently across all columns where null is possible. See HelpdeskTab/index.tsx .	Null/empty category renders as <code>-</code> . No empty cells anywhere in the table.

6. HRMS › Dashboard › Employee Master

File: [apps/intranet/src/pages/dashboard/hrmsDashboard/components/EmployeeMaster/index.tsx](#)

#	Severity	Issue	Recommended Fix	Acceptance Criteria
6.1	UX / UI	Search field deviates from project's standard <code>SearchInput</code> .	Replace with shared <code>SearchInput</code> from <code>packages/ui</code> . Same fix applies to other admin tables — keep this swap consistent project-wide.	Visually identical to standard search across Claims, History, etc.

7. Responsiveness Audit

Reference standards: [apps/admin/PROJECT_GUIDE.md](#) and [apps/admin/DASHBOARD_PAGE_PATTERNS.md](#).

Canonical patterns these files must follow:

- **MUI Grid v6 size prop** — `<Grid size={{ xs: 12, sm: 6, md: 4, lg: 3 }}>` (never `item xs={...}` legacy syntax).
- **Header + actions row** — `MainLayout` with `showPrimaryAction` + `primaryAction`. On `xs`, header collapses to column; action button becomes full-width.
- **Table header filters** — `TableWrapper` with declarative `layout.rows[]` (`left`, `right`, `leftSize`). On `xs`, all controls drop to full-width rows.
- **Form fields** — `Grid container spacing={2}` parent, `size={12}` on `xs`, `size={{ xs: 12, md: 6 }}` for two-column desktop.
- **Section gap** — vertical sections inside `<Stack spacing={t.SECTION_GAP}>` (≈ 26 px).
- **Card grids** — `<Grid container spacing={2} rowSpacing={3}>` with `size={{ xs: 12, sm: 6, md: 4, lg: 3 }}` for stat / holiday / tile cards.

Common anti-patterns observed: raw flex rows that don't wrap (`flexWrap: nowrap`), buttons hard-coded with `direction="row"` without `flexWrap`, headers using fixed-width buttons that overflow on mobile, tile grids using `display: flex` instead of `Grid`, page bodies that bypass `MainLayout` entirely.

7.1 Profile › Documents

File: [apps/intranet/src/pages/dashboard/profile/components/DocumentsTab/index.tsx](#)

#	Severity	Issue	Recommended Fix	Acceptance Criteria
7.1.1	UX / UI	"Search documents" + "Upload documents" sit on a single non-wrapping row; on <code>< md</code> the button is pushed offscreen / clipped.	Wrap in <code>TableWrapper</code> <code>controls : search</code> (<code>grid: { xs: 12, md: 8 }</code>) + <code>upload</code> action injected via <code>MainLayout</code> <code>primaryAction</code> OR a custom control with <code>grid: { xs: 12, md: 4 }</code> . Drop into <code><Stack direction={{ xs: 'column', md: 'row' }}></code> if not using <code>TableWrapper</code> .	At <code>xs</code> : search row 1 (100%), Upload button row 2 (100%). At <code>md+</code> : side-by-side.

7.2 Profile > Nominees

File: [apps/intranet/src/pages/dashboard/profile/components/NomineesTab/index.tsx](#)

#	Severity	Issue	Recommended Fix	Acceptance Criteria
7.2.1	UX / UI	"Add Nominee" button overflows the section header at mobile widths.	Move the action into <code>MainLayout.primaryAction</code> if Nominees is the page-level primary CTA, OR use <code><Stack direction={{ xs: 'column', sm: 'row' }} spacing={1.5} justifyContent={{ sm: 'space-between' }}></code> . Make button <code>fullWidth</code> on <code>xs</code> .	At <code>xs</code> : button stretches full width below title. No horizontal scroll.

7.3 Profile > Timeline

File: [apps/intranet/src/pages/dashboard/profile/components/TimelineTab/index.tsx](#)

#	Severity	Issue	Recommended Fix	Acceptance Criteria
7.3.1	UX / UI	"Joining" milestone button / pill does not wrap on small screens; timeline tile breaks layout.	Convert the timeline row to <code><Grid container spacing={2}></code> with <code>size={{ xs: 12, sm: 6 }}</code> per milestone tile. Replace inline flex row with <code>Stack direction={{ xs: 'column', sm: 'row' }}</code> .	Milestones stack vertically on <code>xs</code> , side-by-side on <code>sm+</code> .

7.4 Profile > Helpdesk

File: [apps/intranet/src/pages/dashboard/profile/components/HelpdeskTab/index.tsx](#)

#	Severity	Issue	Recommended Fix	Acceptance Criteria
7.4.1	UX / UI	"Search ticket" + "Raise HR Support" button collide on tablet/mobile.	Use <code>TableWrapper</code> controls: row 1 → title + Raise button (<code>right</code>), row 2 → search full-width. Mirrors Documents listing pattern in DASHBOARD_PAGE_PATTERNS.md §6 .	Search and CTA never overlap; at <code>xs</code> both occupy full-width rows.

7.5 Attendance & Leaves > Yearly Overview tabs

File: [apps/intranet/src/pages/dashboard/attendance/MyAttendance/components/AttendanceDashboard/](#)

#	Severity	Issue	Recommended Fix	Acceptance Criteria
7.5.1	UX / UI	"Combined / Leaves / WFH" toggle inside the "Yearly Leave & WFH Overview" card spills out of the card header on <code>< md</code> .	Wrap toggle in <code><Box sx={{ overflowX: 'auto' }}></code> AND use <code><Stack direction={{ xs: 'column', sm: 'row' }} spacing={1.5}></code> for header. Toggle uses <code>size="small"</code> and <code>flexWrap: 'wrap'</code> .	Toggle visible without horizontal scroll on 375 px viewport.

7.6 Attendance & Leaves › History filters

File: <apps/intranet/src/pages/dashboard/attendance/MyAttendance/components/AttendanceHistory/index.tsx>

#	Severity	Issue	Recommended Fix	Acceptance Criteria
7.6.1	UX / UI	"All Status" + "All Requests" selects sit on the same row without wrapping; they get cut off on mobile.	Move into <code>TableWrapper.controls</code> as two <code>dropdown</code> types: <code>grid: { xs: 12, sm: 6, md: 3 }</code> each, placed <code>right</code> on row 1 with title <code>left</code> . Layout pattern per DASHBOARD_PAGE_PATTERN S.md §6 .	At <code>xs</code> : two selects stack full width. At <code>sm</code> : side-by-side. At <code>md+</code> : aligned right.

7.7 Claims › "New Claim" button

File: <apps/intranet/src/pages/dashboard/claims/index.tsx>

#	Severity	Issue	Recommended Fix	Acceptance Criteria
7.7.1	UX / UI	"+ New Claim" button breaks header alignment on <code>< sm</code> (overlaps page title).	Use <code>MainLayout primaryAction</code> instead of inline header button — <code>MainLayout</code> already handles <code>xs</code> collapse (column direction, full-width button).	Button stretches full width below title on <code>xs</code> , top-right on <code>md+</code> .

7.8 My KRA — full page

File: <apps/intranet/src/pages/dashboard/kra/index.tsx> + [components/](#)

#	Severity	Issue	Recommended Fix	Acceptance Criteria
7.8.1	UX / UI	Entire page is non-responsive — fixed-width columns, no Grid v6 usage, no <code>MainLayout</code> .	Wrap in <code>MainLayout</code> per DASHBOARD_PAGE_PATTERNS.md §2 . Convert summary cards to <code><Grid container spacing={2} rowSpacing={3}> + size={{ xs: 12, sm: 6, md: 4, lg: 3 }}</code> . KRA form sections → <code><Stack spacing={t.SECTION_GAP}></code> with <code>SectionWrapper</code> .	Page renders correctly at 375 px, 768 px, 1280 px without horizontal scroll or clipping.

7.9 My On/Off-boarding — full page

File: [apps/intranet/src/pages/dashboard/shared/HRMSPageModule/index.tsx](#) (renders the route at [userRoute.tsx:272-281](#))

#	Severity	Issue	Recommended Fix	Acceptance Criteria
7.9.1	UX / UI	Placeholder module renders illustration + CTA in a flex row that does not collapse.	Inside <code>HRMSPageModule</code> , wrap content in <code><Stack direction={{ xs: 'column', md: 'row' }} spacing={3} alignItems="center"></code> . Illustration size capped via <code>maxWidth: { xs: 240, md: 360 }</code> . Once real page is built, follow §7.8 pattern.	At <code>xs</code> : illustration on top (max 240 px), CTA below. No overflow.

7.10 HRMS Dashboard › Shifts tab

File: [apps/intranet/src/pages/dashboard/hrmsDashboard/components/ShiftsTab/index.tsx](#)

#	Severity	Issue	Recommended Fix	Acceptance Criteria
7.10.1	UX / UI	"Search field + All Departments filter + Assign Shift button" all share one non-wrapping row → clipped on <code><lg</code> .	Re-implement header via <code>TableWrapper.controls : title (grid: { xs: 12, md: 4 }), search (grid: { xs: 12, md: 5 }), department dropdown (grid: { xs: 12, sm: 6, md: 3 })</code> . Assign Shift → <code>MainLayout.primaryAction</code> .	At <code>xs</code> : each control on its own row, full width. At <code>lg</code> : single row, no clipping.

7.11 HRMS › My Engagement (empty state)

File: [apps/intranet/src/pages/dashboard/shared/HRMSPageModule/index.tsx](#) (route at [userRoute.tsx:375-384](#))

#	Severity	Issue	Recommended Fix	Acceptance Criteria
7.11.1	UX / UI	"Notify me when ready" + "View roadmap" buttons sit in a row that overflows on mobile; illustration is fixed-width.	Buttons → <code><Stack direction={{ xs: 'column', sm: 'row' }} spacing={1.5} sx={{ width: { xs: '100%', sm: 'auto' } }}></code> . Buttons <code>fullWidth</code> on <code>xs</code> . Illustration → responsive <code>maxWidth: { xs: 200, md: 320 } .</code>	At 375 px: buttons stack, fill width, no horizontal scroll.

7.12 HRMS › Rewards & Recognition (empty state)

File: [apps/intranet/src/pages/dashboard/shared/HRMSPageModule/index.tsx](#) (route at [userRoute.tsx:386-395](#))

#	Severity	Issue	Recommended Fix	Acceptance Criteria
7.12.1	UX / UI	Same empty-state container as 7.11 — same non-responsive button row.	Single fix on <code>HRMSPageModule</code> cascades to both (and to 7.9).	Verified by checking Engagement, Rewards, On/Off-boarding all reflow correctly on <code>xs</code> .

7.13 General › Time Reports

File: [apps/intranet/src/pages/dashboard/timesheets/index.tsx](#)

#	Severity	Issue	Recommended Fix	Acceptance Criteria
7.13.1	UX / UI	"New Row" + "Lock Week" action row uses fixed flex, no wrap. Inputs in the row push these buttons off-screen.	Action row → <code><Stack direction={{ xs: 'column', sm: 'row' }} spacing={1.5} flexWrap="wrap" justifyContent="flex-end"></code> . Make buttons <code>fullWidth</code> on <code>xs</code> . Underlying table row inputs → Grid with <code>size={{ xs: 12, sm: 6, md: 'grow' }} .</code>	Both action buttons reachable without horizontal scroll on <code>xs</code> .

7.14 General › Company — entire page + all tabs

File: [apps/intranet/src/pages/dashboard/company/](#) (top-level [index.tsx](#) and all sub-tabs in [company/components/](#))

#	Severity	Issue	Recommended Fix	Acceptance Criteria
7.14.1	UX / UI — Major	Whole module bypasses the project's grid pattern: section cards laid out with raw flex, no Grid v6, fixed widths, no <code>MainLayout</code> wrapper. Behaves like a desktop-only layout.	Full refactor: wrap page in <code>MainLayout</code> . Each tab content → <code><Stack spacing={t.SECTION_GAP}></code> with <code>SectionWrapper</code> -per-section. Card grids → <code><Grid container spacing={2} rowSpacing={3}></code> + <code>size={{ xs: 12, sm: 6, md: 4, lg: 3 }}</code> for tiles; <code>size={{ xs: 12, md: 6 }}</code> for 2-col content. Pattern source: DASHBOARD_PAGGE_PATTERNS.md §4 . Treat each tab (About, Departments, Policies, Org Chart, etc.) as its own audit pass.	All tabs render correctly at 375 / 768 / 1280 / 1920 px. No horizontal scrollbars. Matches the visual rhythm of the main dashboard page.

7.15 Admin › Organisation › Designations

File: [apps/intranet/src/pages/dashboard/admin/Organisation/components/Designations/](#)

#	Severity	Issue	Recommended Fix	Acceptance Criteria
7.15.1	UX / UI	"Add Designation" button + filter buttons not in a proper grid on small screens — they wrap inconsistently and break alignment.	Use <code>TableWrapper.controls</code> layout. Filters → <code>dropdown</code> with <code>grid: { xs: 12, sm: 6, md: 3 }</code> . "Add Designation" → <code>MainLayout.primaryAction</code> .	Buttons / filters aligned in a clean responsive grid across all breakpoints.

7.16 Admin › HRMS › Portal Users (Add Employee row)

File: [apps/intranet/src/pages/dashboard/admin/HRMS/components/PortalUsers/](#)

#	Severity	Issue	Recommended Fix	Acceptance Criteria
7.16.1	UX / UI	All Department / All Status filters + Import + Export + Add Employee — five controls jammed into a single flex row, no responsive collapse.	Migrate to <code>TableWrapper.controls</code> . Suggested layout: row 1 → <code>title</code> (<code>left</code>) + <code>[department, status]</code> (<code>right</code> , each <code>grid: { xs: 12, sm: 6, md: 3 }</code>); row 2 → <code>search</code> full-width (<code>leftSize: { xs: 12, md: 12 }</code>); Import / Export → <code>actions</code> slot in <code>MainLayout</code> (icon buttons on <code>xs</code> , labelled on <code>md+</code>); Add Employee → <code>MainLayout.primaryAction</code> .	At <code>xs</code> : 5 controls stacked full width. At <code>md+</code> : balanced grid, no clipping.

7.17 Admin › Attendance & Leaves › Holiday Calendar

File: <apps/intranet/src/pages/dashboard/admin/Attendance/components/HolidayCalendar/>

#	Severity	Issue	Recommended Fix	Acceptance Criteria
7.17.1	UX / UI — Major	Holiday cards rendered via raw flex — not in a Grid at all. Entire page lacks the project grid pattern; sub-components do not reflow.	Wrap holiday list in <code><Grid container spacing={2} rowSpacing={3}></code> ; each holiday card → <code><Grid size={{ xs: 12, sm: 6, md: 4, lg: 3 }}></code> . Page shell → <code>MainLayout</code> + <code><Stack spacing={t.SECTION_GAP}></code> . Filters → <code>TableWrapper.controls</code> (year selector dropdown, holiday-type dropdown, search).	Cards reflow as 1 / 2 / 3 / 4 columns across <code>xs</code> → <code>lg</code> . Matches the dashboard stats-card pattern shown in DASHBOARD_PAGE_PATTERN S.md §4 .

7.18 Admin › Roles & Permissions

File: <apps/intranet/src/pages/dashboard/admin/Roles/>

#	Severity	Issue	Recommended Fix	Acceptance Criteria
7.18.1	UX / UI	"Add Role" button + its containing row not in grid — overflows on mobile, button overlaps title.	Move "Add Role" to <code>MainLayout.primaryAction</code> . Table header (search + filter) → <code>TableWrapper.controls</code> with title <code>left</code> , filter <code>right</code> , search full-width row 2.	At <code>xs</code> : header collapses to column; Add Role full-width below title. At <code>md+</code> : standard 2-col layout.

Responsiveness — Refactor Checklist (apply to every file in §7)

When fixing any item above, the change must:

1. **Replace** all `<Grid item xs={...}>` (v5) with `<Grid size={{ xs: ..., md: ... }}>` (v6) — see [PROJECT_GUIDE.md §4](#).
2. **Wrap** the page in `MainLayout` with `pageTitle`, `title`, `subtitle`, and `primaryAction` (if any) — never inline a CTA in the header.
3. **Convert** any `Stack direction="row"` action group to `Stack direction={{ xs: 'column', sm: 'row' }} spacing={1.5} flexWrap="wrap"`.
4. **Migrate** table filter rows to the declarative `TableWrapper layout.rows[]` + `controls` pattern in [DASHBOARD_PAGE_PATTERNS.md §6](#).
5. **Use** `theme.spacing()` tokens only — no raw `px` values in style files (rule §5 of DASHBOARD_PAGE_PATTERNS).
6. **Verify** at 4 breakpoints before closing the ticket: 375 px (mobile), 768 px (tablet), 1280 px (laptop), 1920 px (desktop).
7. **Do not touch** API calls, hooks, props, or service contracts — UI-only changes per [CLAUDE.md](#).

Severity summary — Responsiveness

Severity	Count
UX / UI — Major (full-page non-responsive)	4 (KRA, Company, Holiday Calendar, On/Off-boarding placeholder)
UX / UI — Component-level	14
Total	18

Suggested fix order

1. **P0 — Page-wide refactors:** 7.14 (Company), 7.8 (KRA), 7.17 (Holiday Calendar)
2. **P1 — Shared placeholder (cascades to 3 pages):** 7.9 / 7.11 / 7.12 — fix `HRMSPageModule` once
3. **P2 — Header / filter rows:** 7.6, 7.10, 7.13, 7.16, 7.18, 7.15
4. **P3 — Single-button polish:** 7.1, 7.2, 7.3, 7.4, 7.5, 7.7

Severity rollup (all sections)

Severity	Count
Bug — Blocker	1 (Category Management API)
Bug — Data integrity / business rule	3 (Out < In time, leave overflow, stale pending WFH)
Bug — Other	5
UX / UI — Functional issues	9
UX / UI — Responsiveness (Major)	4
UX / UI — Responsiveness (Component)	14
Feature Gap	1
Total	37

Recommended ordering for fixes (overall)

1. **P0 — Blockers / data integrity:** 1.1, 2.1, 2.8, 2.10, 2.3
 2. **P1 — Functional / missing features:** 2.5, 2.6, 2.9, 4.1, 4.2, 5.1
 3. **P2 — Responsiveness, page-wide:** 7.14, 7.8, 7.17, 7.9 / 7.11 / 7.12 (shared)
 4. **P3 — UX polish & component standardisation:** 2.2, 2.4, 2.7, 3.1, 3.2, 4.3, 4.4, 6.1
 5. **P4 — Responsiveness, component-level:** remaining §7 items
-

Notes

- All UI fixes must stay within the existing API contracts per [CLAUDE.md](#) and the intranet refactor recipe — **do not touch service calls / hooks / props**. Where API changes are required (1.1, 2.3, 2.10), call out a backend ticket explicitly.
- Where a fix mentions a shared component (`SearchInput` , `DatePicker` , `FileUpload`), confirm the prop contract before swapping — **verify in** `packages/ui` .
- Permission audit (calendar visibility, WFH approval visibility, leave-balance enforcement) should be scoped as a follow-up ticket once these issues are triaged.
